Mr. Art Davis  
Conservation Chemical Company  
Box 6066  
Gary, Indiana 46406

Dear Mr. Davis:

Re: Approval for Land Disposal of  
"Neutralized Sludges" from  
Conservation Chemical Company  
Lake County

You are hereby notified that approval is granted for the disposal of the above-referenced waste at the Gary Land Development Sanitary Landfill in Lake County. This approval is for the interim until a more environmentally acceptable method is available.

Approval is granted for land disposal of the above-referenced wastes with the following conditions:

1. That the sludge is mixed with sand for dewatering and disposed in a trench located at least 100 feet from general refuse. No other materials or refuse may be mixed with the sludge.
2. That a minimum of one foot of clay cover soil be applied immediately. Further, that a final cover of two feet of clay be applied upon completion of the area.
3. That the disposal area for the sludge be noted on a plot plan to prevent disposal of other materials in this area.
4. That prior arrangement be made with Mr. Hagen to assure that the sludge is not deposited during inclement weather.
5. That should the disposal of this sludge create an environmental problem, corrective measures will be initiated.

If you have any questions, please contact Mr. John Baker of the Solid Waste Management Section (AC 317/633-6400).

Very truly yours,

JRB/mc  
cc: Mr. Larry Hagen

Roland P. Dove, Director  
Division of Sanitary Engineering
